

TRADE FROM CHART MANUAL V1.5.7

This manual will be updated as we bring updates and fixes to the software. If you have any questions, or need to report issues, please contact us on telegram: @tfc_support_chat. WE DO NOT GIVE TRADING ADVICE.

Please do not contact Tom directly.

After you install the software, you will see new controls on the top bar of your chart (settings are always saved when you change them). There is also an option to have all controls floating as a vertical bar. Please read ahead.

You need to expand the chart to a new tab for the new controls to be visible. The software does not work if your chart is inside CloudTrade's UI.

New options are available on the chart toolbar (or vertical bar if enabled):

- Sell and Buy market buttons and current market spread
- Size, Stop Loss and Take Profit settings (whenever you input any values, they will be automatically saved and loaded when you come back to this market again)
- Settings window
- Positions and Orders window
- Day Transactions window (Module is disabled by default)
- Market Explorer (Module is disabled by default)
- Economic Calendar (Module is disabled by default)
- Software Announcements (Module is disabled by default)
- Trading Signals Window
- Toggles to hide/show all order lines on the chart, show CNBC previous day close price (DAX, FTSE, NAS, DOW and SPY) and High / Low of the day (TD365 High and Low)
- Countdown timer

Settings window

The settings window has 3 tabs. The first one allows you to set dark theme, colours to your position and order lines, show countdown timer by price label, hide and show chart grid and the current market name as a chart watermark

Order Hedge - Set hedge mode to on/off

One-click chart trading - Allows you to create market orders with keyboard shortcuts: Click on the chart, and use "**S**" on your keyboard to place a sell market order, or "**B**" to place a buy market order

PNL Points Display - Show your PL in points instead of currency amount

Position Dbclk to BE - Double-clicking the position line moves your stop to breakeven

(It does require that your current profit/points are at least the minimum distance required depending on the market you are trading)

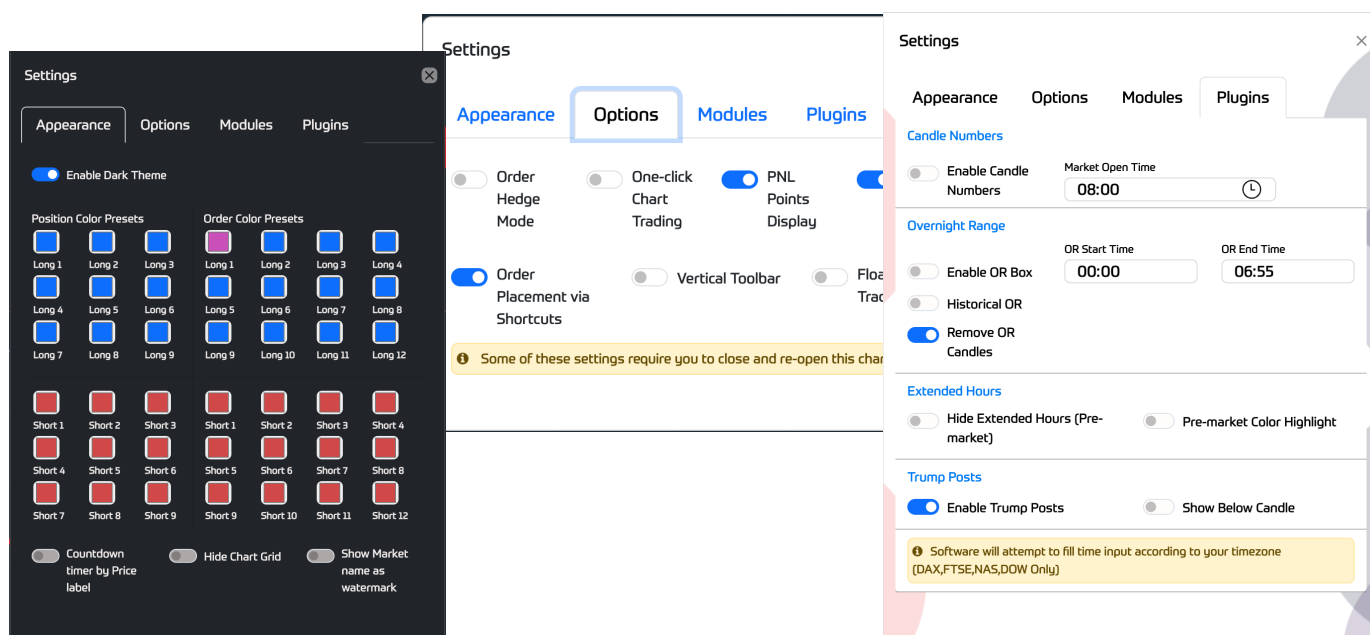

Order Placement via Shortcuts - Toggle on/off order placement using keyboard shortcuts (Shift+B for Buy, Ctrl+S for sell)

Vertical Toolbar - Displays the toolbar as a floating vertical bar in the chart window

Floating Trading Ticket - Displays Trading ticket as a floating option inside the chart

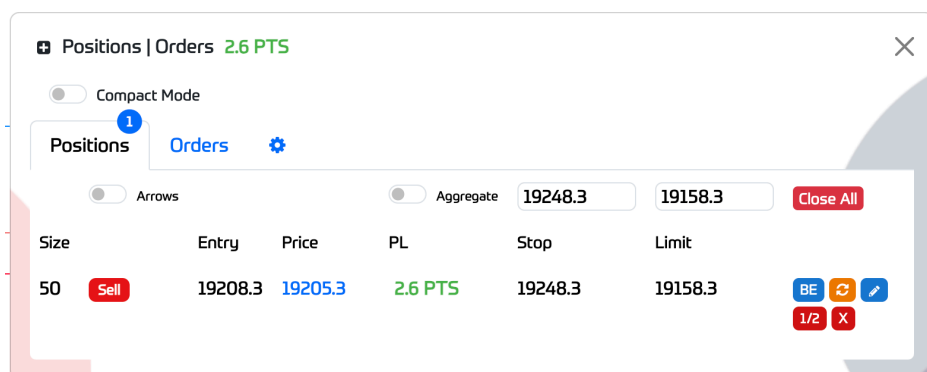

Modules Tab - You can enable or disable individual modules if you have low system resources. You need to close and reopen a new chart tab for changes to take effect. This also applies for any other charts you have open

Plugins Tab - Candle Numbers, Overnight Range Box, Historical OR, Remove OR Candles, Extended hours toggle and Trump TruthSocial Posts as signals on chart

Positions and Orders Window

This window shows your current positions and orders list, showing your position and order attributes

The position tab also includes these options:
Compact Mode - Show basic position attributes only

Arrows Toggle - Show your position entry price/time on the chart represented as an arrow

Aggregate Toggle - If you have multiple positions, this toggle allows you to only see one aggregated position line as the average entry price

Multi Stop / Limit settings input - Allows you to set Stop and Limit prices for multiple positions simultaneously by entering the price and hitting the enter key

Close All Button - Close All positions at once (your closing price for each position may differ if the current market is volatile)

With each position, 5 buttons are available:

BE button - Set your stop price to breakeven **It does require that your current profit/points are at least the minimum distance required depending on the market you are trading**

Reverse Button - Reverses position direction with same size (SL and TP are not set)

Modify button - toggles a window where you can edit your Stop and Limit settings by points

1/2 Button - Closes half size of the position

X Button - Closes the position in full

Position controls

The orders tab lists your current open orders including these options:

Delete All button - Delete all pending orders

Edit Button - toggles a window where you can edit your Stop and Limit settings by points

X Button - Deletes an order

The settings tab allows you to set the following options:

Optimise Close All - (Disabled until further notice)

Hide SL/TP/PL Labels - To declutter chart space you can have all the SL/TP/PL values hidden and only shown when you hover the order line

Hide Position Size - Hides the position size displayed on the order line

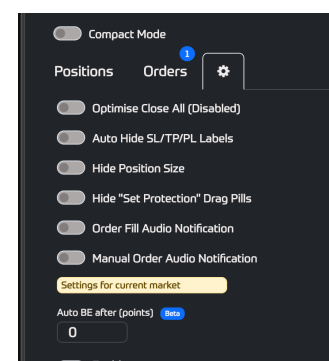

Hide Set Protection Drag Pills - Hides order line pills to set SL/TP by simply dragging them

Order Fill Audio Notification - Emits an "Order filled" audio notification when an order is filled

Manual Order Audio Notification - Emits an audio notification when an you place manual orders

Auto BE - Sets your stop to breakeven after X points in profit.

Enable Trail - AKA "Profit Trail" **BETA** - Once in profit by points setting, the software will move your stop to breakeven and will attempt to trail it at points setting distance from current price, maximising your profit

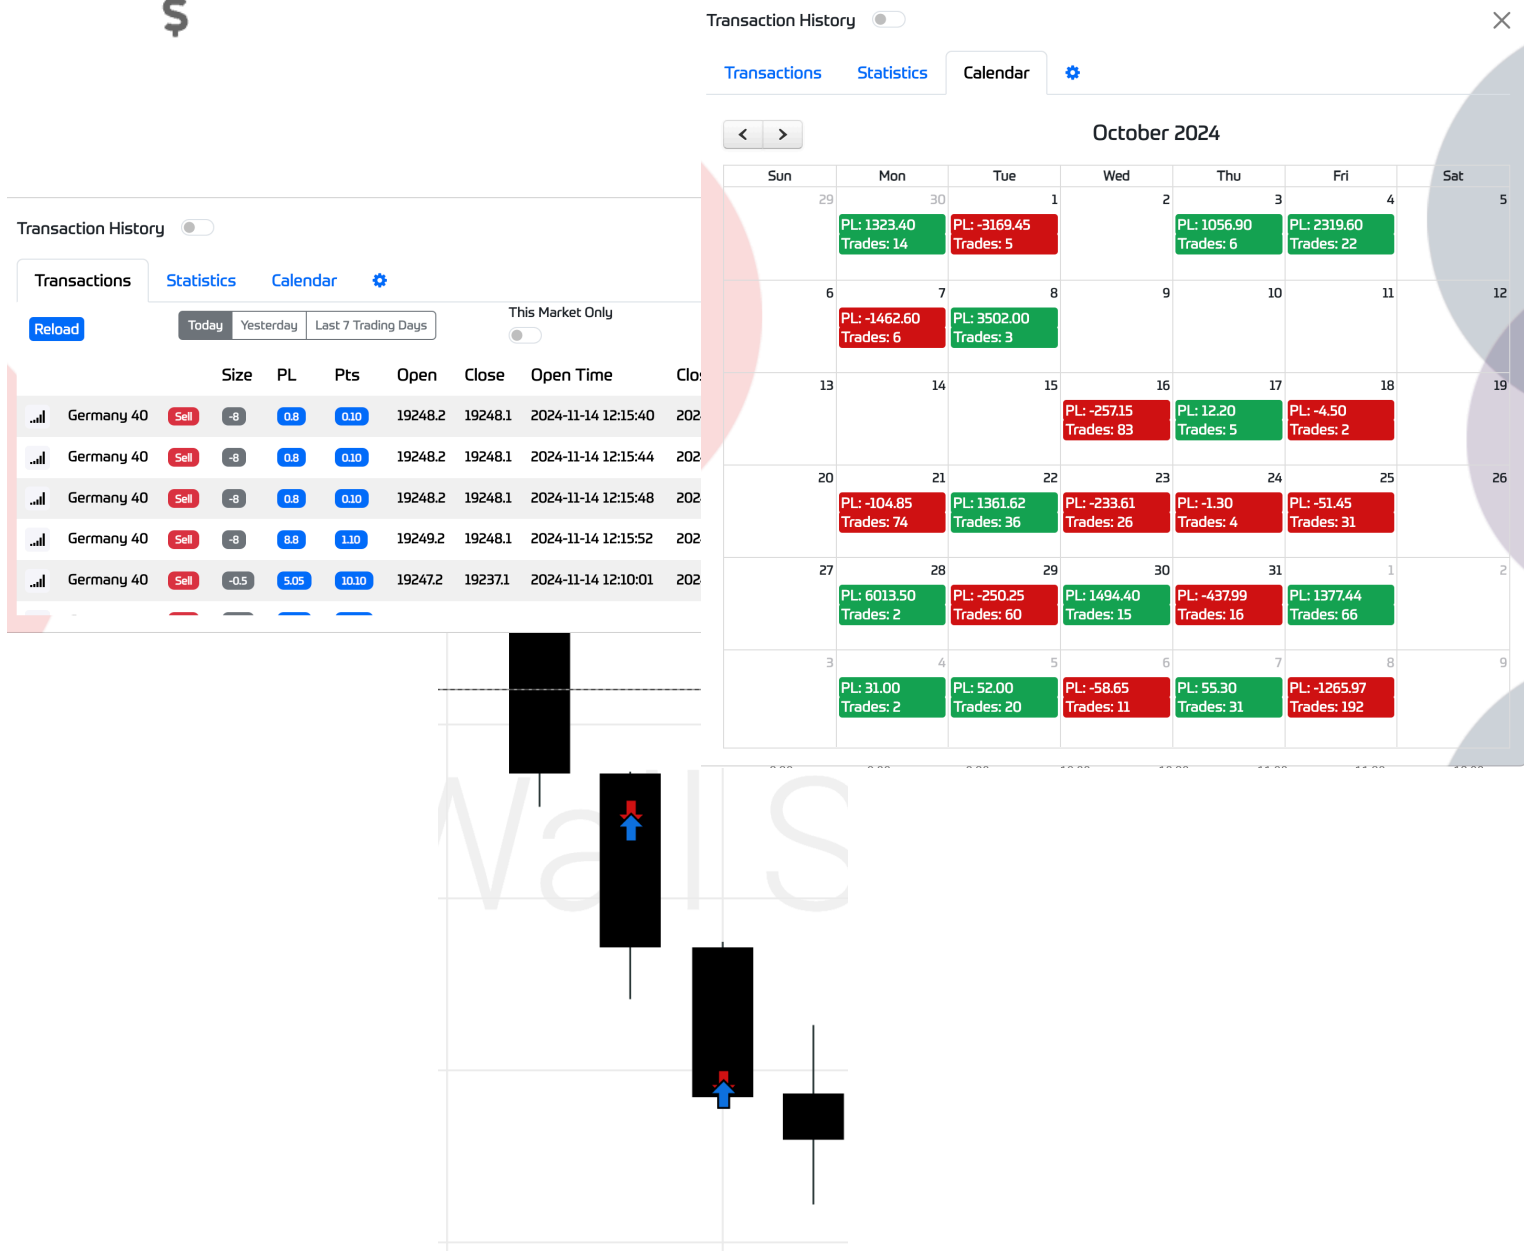

Position settings tab

Transactions Window

The transactions window shows your transactions from today, yesterday or last 7 trading days, a Statistics tab showing number of trades, total PnL, total points, long and short trades count, winners, losers count and your win rate and now featuring a **Monthly Profit Calendar**. You can also see all your trades on the chart by turning the toggle to on. Your entries and exits will be represented as arrows on the chart.

\$

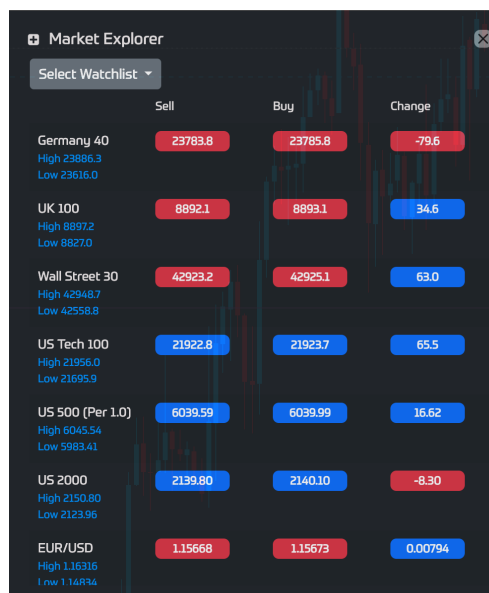

Transactions as arrows

Market Explorer

The market explorer window shows a list of popular markets and a dropdown choice of your own custom watchlists, allowing you a quick view into what's happening with the markets you want to trade, and allows your to quickly switch between charts by simply clicking the market. It shows the high and low of the day, current ask and bid prices, and the daily change in points.

	Sell	Buy	Change
Germany 40 High 23886.3 Low 23616.0	23783.8	23785.8	-79.6
UK 100 High 8897.2 Low 8827.0	8892.1	8893.1	34.6
Wall Street 30 High 42948.7 Low 42558.8	42923.2	42925.1	63.0
US Tech 100 High 21956.0 Low 21695.9	21922.8	21923.7	69.5
US 500 (Per 1.0) High 6045.54 Low 5983.41	6039.59	6039.99	16.62
US 2000 High 2150.80 Low 2123.96	2139.80	2140.10	-8.30
EUR/USD High 1.16316 Low 1.14834	1.15668	1.15673	0.00794

Market Explorer - Click on the market name to change chart

Economic Calendar

View current economic events that may affect the markets by using the Economic Calendar. Filter by today, tomorrow and weekly events. There is also a filter by volatility. Hover over the event title to see a detailed description of the event.

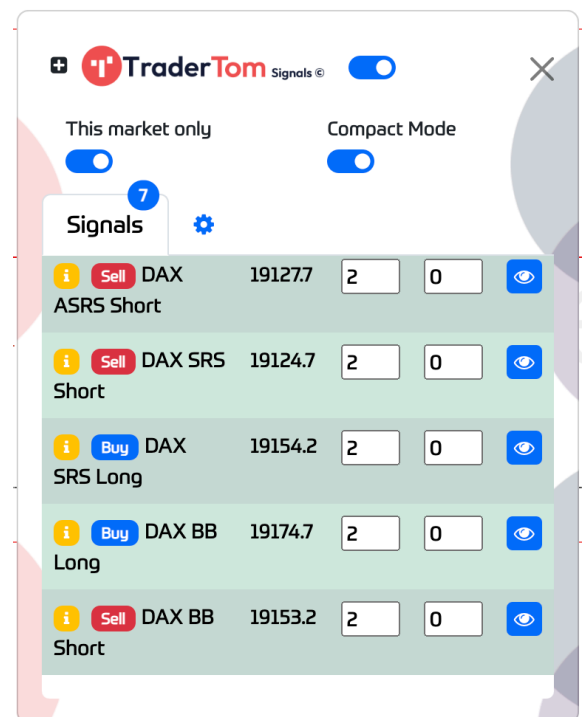

Events are also displayed in chart at the exact time the event will happen. We have also added Trump's TruthSocial posts realtime updates

Trading Signals Window

The trading signals window offers you a choice of mechanical algorithmic issued signals developed by Tom Hougaard. It includes the Advanced School Run and School Run for DAX, Brunch break for DAX, First Bar negative for the FTSE, Advanced School Run and School Run for the Dow and School Run for the Nasdaq. And many more to come!

In order to connect to our signals API, please make sure that you have the toggle switched on. Upon first load it will connect automatically.

When a signal is issued by our algorithms and are sent to you, they will be visible on the current or previous tab (if you have audio notifications on, they will make a sound). It shows the entry price, stop and limit point options and also allows you to see the signal line on the chart by double clicking the blue eye icon. After the signal line is visible on the chart, clicking the **Trade button** on the signal line will automatically create an order on the price level indicated. The size will be the default you set for the market the signal is for.

The settings tab has the following options:

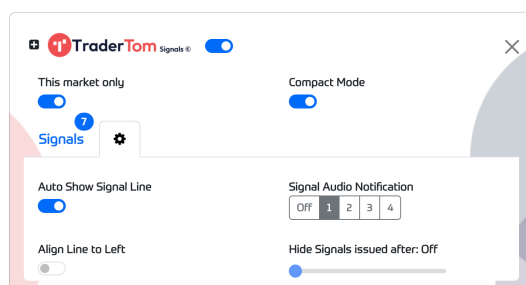

This Market Only - Filter signals only for the current market

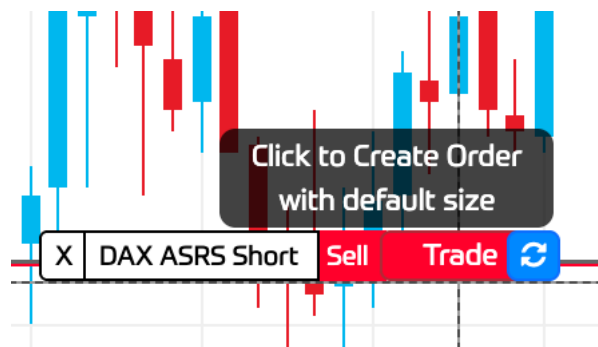

Compact Mode - Saves screen space by hiding certain elements from the window

Auto Show Signal Line - When a signal is sent, automatically show the signal line on the chart (if the signal matches the current market open)

Signal Audio Notification - Choose from a choice of audio notifications when a signal is sent

Hide Signals Issued - Hide Signals after x minutes passed (helps to declutter)

Software Announcements Window

Here, you will receive the latest updates and news about the software.

Other Menu Bar Options

Toggles ☐

- 1 - **Hide / Show** all lines on the chart
- 2 - **Show Last Day Close** - Last close price for FTSE, DAX, DOW, NAS and SPY
- 3 - **Show High and Low** - Show high and low of the day (TD365 high and low)

Countdown timer **02:10**

- Countdown timer that follows the current timeframe bar close.

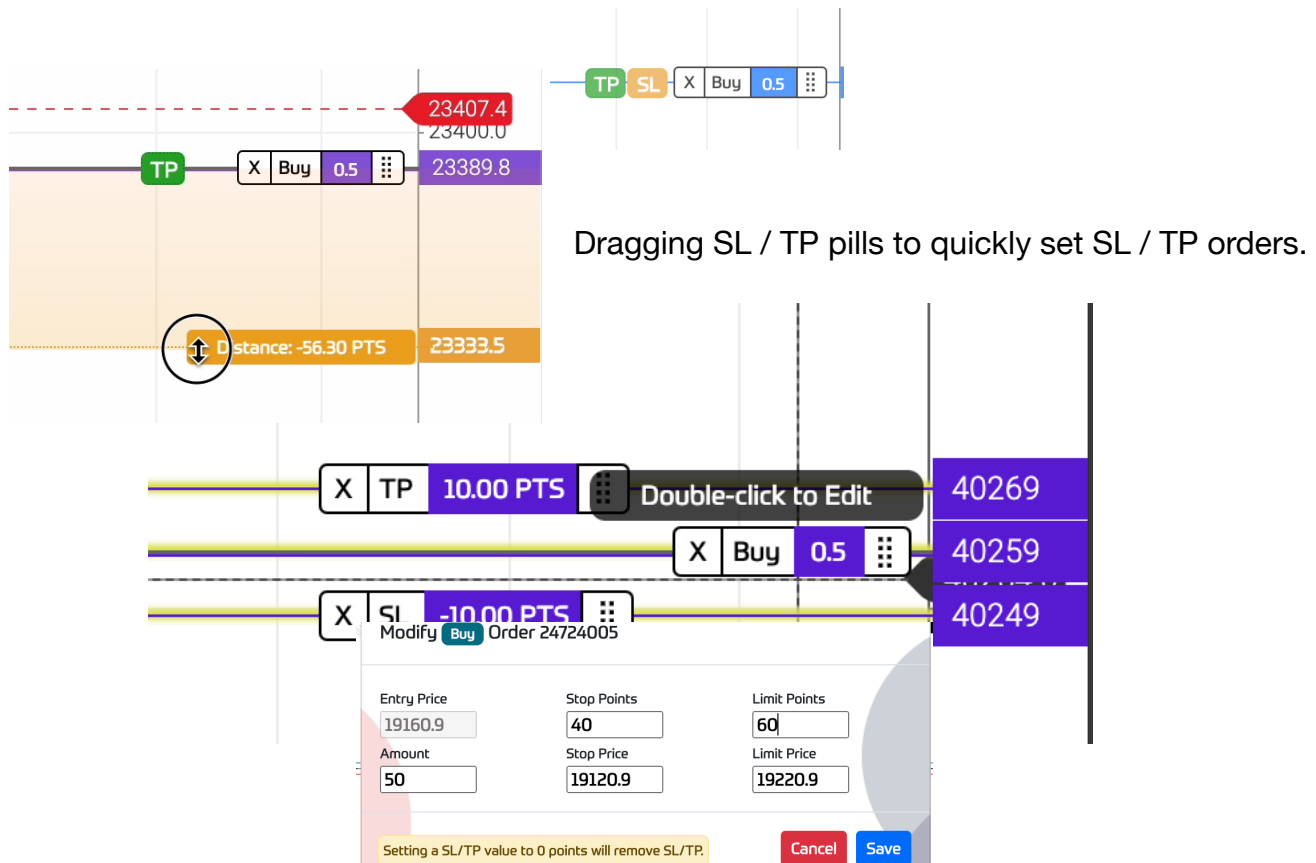

Order Line Options

Deletes the order. Clicking the X button on a TP / SL line will remove them respectively.

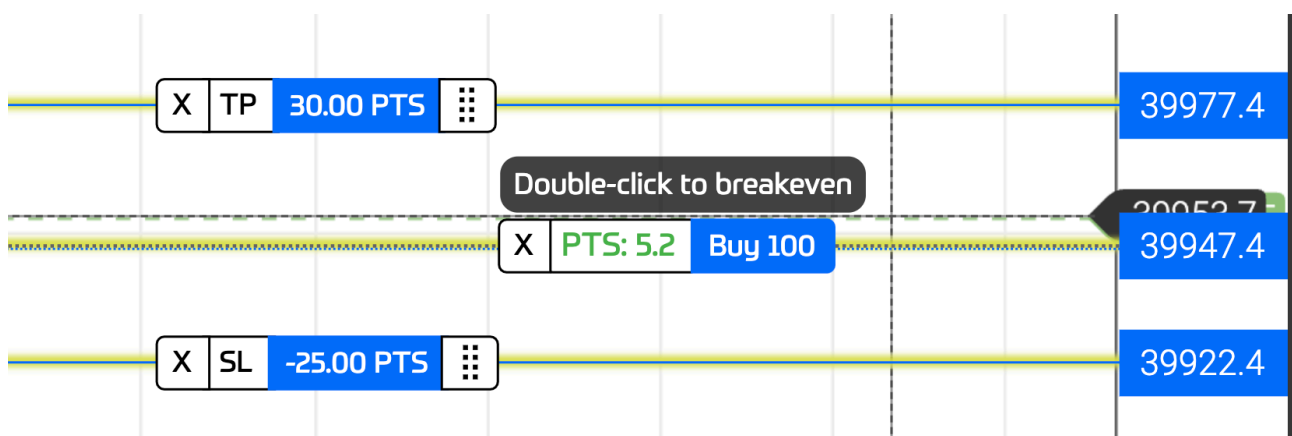

Double-clicking the size section will toggle the modify window, allowing you to edit your stop and limit points. Dragging the dragger “dots” allows you to move your order.

Position Line Options

X X Button - Close your position. Clicking the X button on a SL / TP line will remove the “protection” orders (SL / TP).

Double-clicking the size section will set your stop to breakeven IF you have this enabled on your settings window (it does require that your current profit/points are at least the minimum distance required depending on the market you are trading). Otherwise the behaviour is similar to pending orders: it will toggle the modify window, allowing you to edit your stop and limit points for the position.

HOW TO PLACE PENDING ORDERS

Option 1:

BUY ORDERS - Hold **SHIFT** on your keyboard while hovering over the chart and click on the price level you wish to create your order.

SELL ORDERS - Hold Control **CTRL** on your keyboard while hovering over the chart and click on the price level you wish to create your order.

Option 2

You can now use the floating trading ticket order “pills” to place orders by simply dragging the pill to the price level you wish your order to be placed. Use the **Blue** “pill” for buy orders and the **Red** “pill” for sell orders.

Custom Horizontal Line

Hold L, click on a point in the chart and drag to create a custom horizontal line with price label

Change History V1.1 (18.08.2024)

- Fixed issue with chart freeze upon 1st loading.
